SOFTWARE					
1	RMS-CANINE-T4	CANINE TRACKING MODULE This module is designed to collect information related to activities where a K-9 team has become involved. This module participates in the existing RMS security model allowing the customer to assign user access rights to the K-9 module. Multiple K-9 activities may be associated with one K-9 record. The module will allow for collection of both "training" and "working" activities. "Working" activity is defined as non-training events where the K-9 team has become involved. The K-9 tracking module participates in the involvement subsystem by establishing involvements between a valid Incident report record and the K-9 record linked by a common case number. An involvement will also be created to the master location record associated with the K-9 activity. If a K-9 team checks multiple locations or dwelling where there are multiple hits, the K-9 officer will receive multiple case numbers for the activity. In this case, multiple K-9 records will be created and each hit will be treated as a separate event.	\$3,600.00	\$3,600.00	\$576.00
