Re: Parks and Recreation - Albert-Oakland Family Aquatic Center Improvements Public Hearing

Executive Summary

Public hearing for the Albert-Oakland Family Aquatic Center (AOFAC) Improvement project. Improvements at the aquatic facility located within Albert-Oakland Park will include replacement of the metal roof on the bathhouse and lighting and plumbing improvements. The project will also include the conversion of all facility lighting to LED lights and the installation of a shade structure on the southeast corner of the pool deck. The project is identified in the City's FY-2016 CIP with a total project budget of \$80,000. The project is funded by the 2010 Park Sales Tax. The improvements will be completed using a combination of contract and force account labor, with different portions of the project being bid through the City's Purchasing Department. Improvements to the facility are expected to begin this winter, with an anticipated completion date by the opening of the facility for the summer aquatic season.

Discussion

The 73-acre Albert-Oakland Park located at 1900 Blue Ridge Road provides recreational activities for all age groups with tennis courts, shelters, pickleball courts, playgrounds, and sports fields available throughout the park. The park also contains the Albert-Oakland Family Aquatic Center, two disc golf courses, and serves as a trailhead for the Bear Creek Trail. The Albert-Oakland Family Aquatic Center is the largest aquatic facility operated by the Parks and Recreation Department and had 22,800 visitors at the facility in 2014.

The Albert-Oakland Family Aquatic Center underwent a major renovation in 1999, including improvements to the 50-meter pool, addition of a water play structure, addition of new seating and funbrellas, and necessary mechanical improvements. Since the renovations in 1999, facility improvements have also included the addition of a 125-foot double-loop enclosed slide, the replacement of the water play structure, and the addition of a family changing room.

In August 2015, park staff (planners, maintenance personnel and aquatics staff) began to discuss different options to improve the Albert-Oakland Family Aquatic Center. Discussion focused on necessary repairs to the roof and interior plumbing, improvements that would lower utility expenses, and the addition of new amenities for aquatic facility users. Park staff made the decision to focus on four key improvements: bathhouse roof replacement, bathhouse plumbing and lighting improvements, replacement of the exterior facility lighting, and the addition of a shade structure on the pool deck. After park staff created initial design plans, staff introduced the proposed improvements to the Parks & Recreation

Commission at their November 19, 2015 meeting. After discussion about the project, the Commissioners approved the plans for the park improvements. Staff also held an interested parties meeting at the Activity and Recreation Center on December 8, 2015 to gather feedback regarding the plans for improvements to the facility. After considering all citizen comments and the P&R Commission recommendation, staff believes that the proposed improvements to the Albert-Oakland Family Aquatic Center represent a consensus of park users, P&R Commission and staff.

Improvements to Albert-Oakland Family Aquatic Center will include the following improvements:

1. Contract labor will be used to replace the existing metal roof on the bathhouse including the replacement of any water-damaged plywood under the existing roof.
2. Park staff will replace all exterior lighting on the pool deck and at the front entrance to the facility. Current lighting at the facility has been added in multiple stages over the past 20 years, with different types of bulbs and light poles throughout the pool deck. Staff will replace all the existing lights with LED lighting fixtures and matching light poles to provide improved lighting for evening facility rentals, improve aesthetics at the pool, and to reduce utility costs associated with the operation of the lights. The lights will be bid through the City's Purchasing Department with installation of the poles and lights completed by park maintenance staff.
3. Staff will install a 20 foot by 60 foot cantilever shade structure on the southeast corner of the pool deck to provide shade for aquatic facility users. The addition of shade on the pool deck was requested by aquatics staff and patrons due to the limited amount of covered space around the pool. A similar shade structure was installed at Twin Lakes Recreation Area in 2013 at Little Mates Cove aquatic facility and has received many positive comments from patrons that utilize that facility.
4. The final improvement at AOFAC will be to upgrade the existing plumbing and lighting inside the bathhouse. Park maintenance staff will replace all shower fixtures located in the men's and women's locker rooms, as well as sinks, soap dispensers and hand dryers in each area. Ongoing maintenance has continued to increase due to the age of the shower and toilet fixtures in the locker rooms, and new shower fixtures will improve the efficiency of the showers in terms of water consumption by facility patrons. Staff will also replace all interior lighting in the locker rooms and hallways with LED lighting fixtures. The replacement of the fixtures will improve the visibility inside the bathhouse and reduce the overall utility expenses inside the building. The decision to improve the plumbing and lighting was made after gathering public input and staff recommendations about potential projects due to the current condition of the fixtures and lighting.

City of Columbia

701 East Broadway, Columbia, Missouri 65201

The Albert-Oakland Family Aquatic Center improvements will cost \$80,000 and are funded by the 2010 Park Sales Tax. The project will be completed using a combination of contract and force account labor. Materials for the project and contract services for roof replacement will be bid through the City's Purchasing Department. Force account labor will be used for all renovations, except for the replacement of the existing roof. The project is anticipated to start in January 2016 and be completed by the opening of the facility for the summer aquatic season.

Fiscal Impact

Short-Term Impact: The total project cost for the improvements is \$80,000 and is funded by the 2010 Park Sales Tax.

Long-Term Impact: Parks and Recreation staff currently maintain and operate the facility, and the conversion to LED lighting will lower the utility costs associated with the operation of interior and exterior lighting. Improvements to the plumbing, fixtures and toilets inside the bathhouse will also reduce the total number of hours spent by the maintenance staff at the facility each season.

Vision & Strategic Plan Impact
