* Total System MWH's increased 6.66% compared to the same time last year

** System load up 7.0% for summer (May-September)

** Load has been up every month this year except for July

** Cooling Degree days up 45.3% for summer and 41.2%YTD

* Columbia Landfill MWH's decreased by 6.07% compared to the same time last year

** Electrical production is lower due to reduced gas production at the landfill. This is due to less well field production in summer, primarily due to dryer conditions
