		0	\$19,171.00	\$43.13	Douglas Kenney	
	Description: the west wall of the home to be leaning in from the top, water damage in the north west. We will excavate and install a steel reinforced concrete wall a minimum of 8-12 feet out from the existing wall. Anchor rods and interior steel plates will connect the existing foundation wall and the concrete anchor to permanently prevent further inward movement of the foundation wall. We will install a steel channel on the top of the wall as well as on the joists and push the wall back out to its original level condition. Excavate and clean wall to apply code appropriate waterproofing including drainage pipe and gravel fill. Service 1 existing window well, and adding two egress windows (and wells). Adding sump pump, and sump discharge line. We will install steel Helical piers to support and lift (if applicable) the foundation in the affected area. Pier spacing is typically 6-8 feet depending on the load and the walls ability to span. Upon completion we backfill using existing soil. Exterior Drainage through addition of collection basins, buried discharge line, and dry well.
