a. Final Review of Recommendations on use of Opioid Settlement Funds

The Board of Health discussed the wording of the Recommendation. Members suggested that certain wording used in the recommendation have negative connotations. There were discussions about data collection and how that information would be collected or used. Feirman said that he wanted current data to be built upon and wanted that included in the recommendation. Skala indicated she would add that language. The Board agreed that there needed to be more resources dedicated to helping people receive treatment after naloxone use.
