Thanks Kevin – I will relay that to our team. With the masonry wrapping up on the project it should be significantly decreased as well.

Subject: Re: Alley Closure Extension

Our only issue is construction debris and mud that flows down the alley and gets tracked into our building by delivery people and employees.

If you could power wash and clean up the alley behind on our property on a regular basis it would be much appreciated.

Kevin – It is unfortunate, but we are going to have to extend our Alley closure again for the construction of Broadway Hotel 2. I haven't heard much since the fence was relocated in October to its current location. Is that still working for you all? Design delays have not allowed us to complete the bridges in the anticipated timeline which is the main reason for the alley extension.

Please let me know if you have any concerns with the current fence location.
