

# Wastewater & Stormwater Integrated Management Plan

The City of Columbia is updating its Integrated Management Plan (IMP) to meet critical infrastructure needs for improving our community waterways and address regulatory requirements. By taking a short survey and attending the public meeting, residents can help the utilities ensure that the projects in the original plan continue to be appropriate, affordable and aligned with community priorities.

## Public Meeting

**Date:** Wednesday, Aug 21, 2024

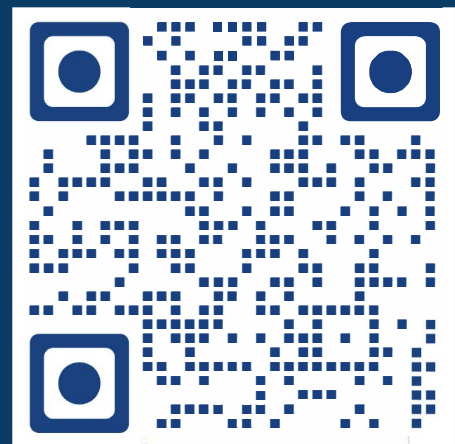

**Time:** 5:30 - 7:30 p.m.

**Location:** Activity & Recreation Center  
1701 W. Ash St., Columbia, MO, 65203

## Plan Objectives

The IMP will help us target investments in the wastewater and stormwater programs to:

- Protect public health and public safety
- Improve quality of life
- Provide sustainable services for the future
- Achieve regulatory compliance
- Improve water quality in City streams

the survey

# A 5-Year IMP Action Plan

The Integrated Management Plan (IMP) is a community-driven, affordable infrastructure plan that enhances human health and safety, water quality, economic vitality and environmental resources by leveraging our existing assets and implementing innovative solutions.

In 2017-18, the City of Columbia conducted a communitywide survey to obtain input from residents. These workshops were critical to the planning process, as they helped our team develop an Integrated Management Plan that is tailored to the needs of our community. This plan was approved by the City Council in December 2018.

The City established a 5-Year IMP Action Plan that targeted future needs while implementing Capital Improvement Projects and necessary operation and maintenance activities.

The photos below show some of the projects implemented by the City during this 5-Year IMP Action Plan.

Provide sustainable services for the future

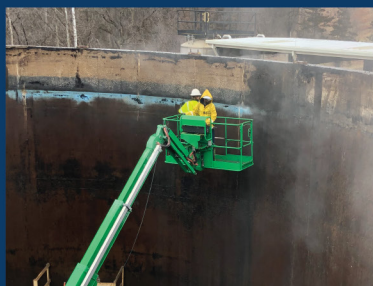

Stabilize stream channels to reduce sediment discharges

Enhance public education and outreach

Address areas of flooding to reduce safety concerns

Rehabilitate treatment facilities and equipment

Implementing stormwater runoff treatment
