

1.) What concerns do you have related to vehicular traffic on West Ash?

- Speed of traffic - we want to keep speeds low so it's safe for pedestrians and cyclists. Slowing down traffic at intersections (especially West/Ash) is especially important.

2.) What concerns do you have related to pedestrian traffic on West Ash?

- Safety of pedestrians, especially at crosswalks.

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

- Improved intersections with full crosswalks - preferably raised crosswalks (at grade) to slow traffic and increase pedestrian safety.
- Additional street trees to encourage traffic calming and give a more neighborhood feel.
- Full sidewalks on both sides of the street.

4.) Are there any improvements that you do not want and why?

- Anything that increases traffic speed or decreases visibility of pedestrians.

- Matt Wright

Marlyn  
Whitney

1.) What concerns do you have related to vehicular traffic on West Ash?

no complete sidewalks  
no/in frequent cross walks for pedestrians  
inattentive and/or reckless drivers  
speeding  
no traffic light at Ash & West Blvd.

2.) What concerns do you have related to pedestrian traffic on West Ash?

incomplete sidewalks  
no/in frequent cross walks, speeding motorists  
people don't clear sidewalks in winter

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

Yes, definitely!

complete sidewalks or shared use paths on at least  
one side for entire length of Ash  
Both sides better.

A raised pedway may be better  
Narrowing the driving lanes would slow traffic  
We need something to prevent high speed cut-throughs  
from Ash to Worley (using the  
N's streets)

4.) Are there any improvements that you do not want and why?

no roundabouts. Ash is not ~~proper~~ adequate  
scale for them. ~~They~~ And they are terrible for  
pedestrians because there is never a break in  
traffic to allow safe crossing

1.) What concerns do you have related to vehicular traffic on West Ash?

I feel that Ash is being used as a throughfare because we don't have a light, when Worby & Broadway do.

2.) What concerns do you have related to pedestrian traffic on West Ash?

We do not have continuous sidewalks, which is dangerous for pedestrian's and wheel chairs

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

We need an improvement in sidewalks on both sides of the street + a more clearly-defined bike lane

4.) Are there any improvements that you do not want and why?

I think a roundabout would take too much space and be dangerous to pedestrians.

I also doubt it would slow traffic

Lauren Mitchell

1.) What concerns do you have related to vehicular traffic on West Ash?

Pedestrian + Bike safety: Ability to  
cross Ash between major intersections  
Discourage cut through traffic

2.) What concerns do you have related to pedestrian traffic on West Ash?

Need <sup>continuous</sup> sidewalks on both sides of Ash  
Don't want increased <sup>vehicular</sup> speed on Ash

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

Need better infrastructure for walking, wheelchairs  
& bikes

4.) Are there any improvements that you do not want and why?

Dee Dokken

1.) What concerns do you have related to vehicular traffic on West Ash?

It is difficult to feel safe as a person who walks in the neighborhood. The cars go too fast and there are lots of accidents.

2.) What concerns do you have related to pedestrian traffic on West Ash?

Of even greater concern is the many people using wheelchairs - I feel for them! But also people walking. The car traffic goes too fast to feel safe. It gets very unsafe when we have snow.

3.) From a resident's perspective, improvements are needed along West Ash?

Traffic calming designed into the street. Make the cut-thru traffic racing through our intersecting streets stop. No more on-street parking on W. Ash.

4.) Are there any improvements that you do not want and why?

I do not want faster cars, because the street is made more accommodating to them during this project.

1.) What concerns do you have related to vehicular traffic on West Ash?

Keep the street/sidewalks simple, only redesign areas that are a problem.

2.) What concerns do you have related to pedestrian traffic on West Ash?

Sidewalks on one side only.  
Crosswalks.  $\phi$  roundabouts.

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

Only @ ~~main~~ intersection of West + Ash.  
Crosswalks at other cross streets.

4.) Are there any improvements that you do not want and why?

Roundabouts - too small of a area at intersections.  
 $\phi$  sidewalks necessary on both side.

## 1.) What concerns do you have related to vehicular traffic on West Ash?

The intersection of West Blvd and Ash has often been a safety issue. Cars often run the stop sign whether distracted, or not knowing the intersection is there as it can be hard to see, west bound; it can be hard to see, particularly when the sun is low. Also the absence of a eastward bike lane between Glenwood and McBaine is dangerous. Cars often have to decide whether they will choose to share the lane. Cars often travel faster there as there are fewer homes in that section.

## 2.) What concerns do you have related to pedestrian traffic on West Ash?

There is no continuous sidewalk between Garth + Clinkscres. Often you may need to cross Ash multiple times to get to a destination. ~~There~~

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

A complete bikelane or pedway both directions without interruptions. There should be a highly visible crossing at Aldrich/Alexander and Ash. Traffic calming to slow and discourage through traffic that would be more suited for higher capacity streets.

## 4.) Are there any improvements that you do not want and why?

I would not like to see the street widened at all. Making the street wider will just encourage faster traffic. I would like to see the intersections designed with a priority of slowing <sup>car</sup> traffic and keep foot, wheelchair + bike traffic safer.

1.) What concerns do you have related to vehicular traffic on West Ash?

- Too much speeding
- Numerous traffic accidents at Ash/West near West Blvd. Elementary
- Drivers miss/run the stop signs at Ash/West

2.) What concerns do you have related to pedestrian traffic on West Ash?

- Sidewalk is not continuous on both sides of the street
- crossing at Ash + Clinkscles is particularly difficult due to missing side walk at 2 out of 4 directions.
- Non-continuous bike lane
- Pedestrian crossing is unsafe at West/Ash <sup>what</sup> intersection due to traffic

3.) From a resident's perspective, <sup>what</sup> improvements are needed along West Ash?

- Complete / continuous sidewalks on both sides
- Protected pedestrian path with raised crossings.
- Narrow driving lanes to slow traffic
- A pedestrian crossing signal (light) at Ash/West

4.) Are there any improvements that you do not want and why?

- We don't want to lose any street trees  
(Any lost trees should be replaced w/ Mature trees)
- Don't widen roads or intersections. This speeds up traffic.
- <sup>Do</sup> Use intersection designs that slow down traffic, such as traffic lights. Critical of currently used roundabout designs that seem focused on moving traffic efficiently.
